

Barrel Clamps

Barrel Clamps - Referred to as "Barrel Clamp", this hydraulic attachment is actually used on forklifts so as to compress items which you want to move utilizing the lift truck. Typically, they're utilized so as to handle kegs, paper rolls and barrels, along with a few barrel clamp designs being able to rotate the load. For instance, the rotate function permits the individual operating the forklift to be able to insert a vertically stored paper into the horizontal intake of a printing press.
