Moreover, there are more than 90 independent sellers moving lift truck equipment and materials handling equipment. This network allows Doosan Infracore America to aggressively compete in this competitive market. The forklift product line remarkably comprises of 63 distinctive versions consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion vehicles. Capacities of these numerous vehicle designs range from 3,000 to 33,000 lbs. All trucks are built in an ISO 9001 certified facility.

Doosan Infracore America is the fastest developing forklift and lift truck corporation in the North American market, due to its outstanding level of product performance and their persistently high level of client support and service given to all Doosan Infracore Lift Truck clients. The U.S. forklift division located in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Marketing, Logistical and Technical Support.

At first the home-based forklift market in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled lift trucks as part of a home-based equipment expansion venture. Product sales of these goods were originally targeted to state-run firms, large scale organizations, and the armed forces. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical instruction became the new focus for improving quality and product development.

Domestic forklift trade for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a situation of considerable expansion of their lift truck operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to assist them in the very competitive North American materials handling market. This joint-venture proved highly lucrative for Daewoo and their lift truck product sales expanded greatly. In 1984, the company completed construction of a new facility to help in manufacturing high end value-added goods for export. In 1993, the company had a global sales network and started exporting designs they had established through in-house technology, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international marketplaces.
